## Verano BGA Oasis

Named after the Spanish word for summer, the 2010 Verano BGA PC Oasis builds on the strengths of previous models offering unbeatable performance and value in a brand new "super lightweight" magnesium alloy body. The design is both elegant and simple and delivers a range of Opticron BGA models with finished weights between just 524g and 654g.

Fitting neatly between the Imagic BGA SE and Countryman BGA T PC in terms of overall optical performance and specification, the three models; 8x32, 8x42 and 10x42 utilise a fully multi-coated, internally focused roof prism optical system which has been 'balanced-out' to deliver optimum colour contrast across a wide range of different light conditions. The combination of high quality PC phase corrected prism and Oasis high reflection prism coatings maximise light transmission and resolution while the complex multi-element eyepiece designs ensure comfortable vision for spectacle wearers with minimal edge distortion.

Mechanically the Verano benefits from;

- Internal focusing with close focus to 1.8 metres or under
- Nitrogen waterproof construction to a depth of 3 metres
- Highly durable textured rubber covering for comfort and grip
- Revised Opticron 'house style' wide wheel focusing
- Smooth action aluminium twist type eyecup assemblies
- Comprehensive 30 year guarantee.

Verano BGA PC Oasis models are supplied in a soft neoprene case with neoprene lanyard and rainguard.
